

Noelaven Design System v1

This document is the single source of truth for the Noelaven interface. Developers must implement these designs exactly and must not redesign or reinterpret them.

1. Brand Identity

Black background (#000000), white typography, official Noelaven lighthouse logo (white lighthouse, gold heart, gold beam, rainbow ring, rainbow waves). Never recreate or approximate the logo; always use the approved asset.

2. Home Screen

Header: official logo, white Noelaven wordmark, search and notification icons. Stories use rainbow rings for unread, dark gray for viewed, gold '+' badge on user's story. Feed uses rounded black cards, white text, gray metadata, rainbow prompt outline, minimal actions. Daily Spark uses a black card with thin rainbow outline, rainbow Answer button, dark Skip button, gold streak badge.

3. Navigation

Flat black bottom navigation. No white circle around Spark. Active icon uses rainbow gradient with subtle glow and thin underline. Inactive icons are gray.

4. Messages

Dark conversation list with aligned avatars, white names, gray previews, rainbow unread indicators.

5. Communities

Large dark cards, white titles, rainbow accent highlights, gold Join buttons.

6. Profile

Large avatar, premium spacing, dark statistic cards, founder badge in gold, verified badge where applicable.

7. Calls

Implement to closely match the approved mockup: black background, rainbow accent borders, circular controls, clean typography, video preview placement, minimal interface.

8. Universal Rules

Use an 8dp spacing grid. Use one font family consistently. No white screens. No oversized gradients. Rainbow is reserved for brand accents, story rings, Spark, logo, and subtle highlights.

Implementation Workflow

Rebuild one screen at a time. Home -> Daily Spark -> Messages -> Communities -> Profile -> Calls. Each screen must be approved before moving to the next.
